Education

University of Florida, Florida, United States **August 2024 - May 2026**

Master's, Computer Science ***GPA: 3.92 / 4.00***

- Courses**:** Data Structures & Algorithms, Object-Oriented Programming, Operating Systems, Computer Networks, Distributed Systems, Database Systems, Software Engineering, Cloud Computing

Skills

Programming Languages: Java, Python, Go, C++, JavaScript, TypeScript, SQL, Bash

Backend Frameworks & Services: FastAPI, Spring Boot, Flask, Node.js, Express.js

Databases & Caching: PostgreSQL, MySQL, MongoDB, DynamoDB, Redis, Elasticsearch

Frontend: React, HTML5, CSS3, REST-based frontend integration

Cloud & DevOps: AWS (EC2, Lambda, S3, RDS, DynamoDB), Docker, CI/CD Pipelines, GitHub Actions, Jenkins

Software Engineering: RESTful APIs, Microservices Architecture, Object-Oriented Design, Distributed Systems, System Design Fundamentals, Agile/Scrum

Certifications

- AWS (Amazon Web Services) Certified Solution Architect – Associate-LINK
- AWS (Amazon Web Services) Certified Cloud Practitioner -LINK

Experience

Software Engineer **Jan 2025 - Present**

University of Florida *Gainesville, Florida*

- Built scalable backend services using **Python and FastAPI** by designing RESTful APIs that handled **100+ concurrent users**, improving request throughput by **40%**.
- Optimized database access using **PostgreSQL and Redis caching**, reducing average API response latency by **30%** through query tuning and cache layering.
- Deployed backend services on **AWS (EC2, S3, RDS, Lambda)** using Docker-based workflows, improving deployment reliability and reducing release issues by **25%**.
- Integrated APIs with a **React-based frontend** by standardizing request/response contracts, improving feature delivery speed by **20%** across iterations.

Software Development Engineer **May 2022 - December 2023**

C Square Solutions *Bangalore, India*

- Developed backend services using **Java and Spring Boot** by implementing REST APIs that supported **10K+ daily requests** across **5+ production** applications.
- Improved system performance by **35%** by optimizing SQL queries, indexing strategies, and join patterns in **PostgreSQL.**
- Designed maintainable backend architectures using layered patterns (controller, service, repository), reducing recurring production defects by **20%**.
- Collaborated with frontend teams using **React-based clients** by exposing stable APIs, reducing integration issues and rework by **30%**.

Projects

Task Management & Notification Service *Python, FastAPI, PostgreSQL, Redis, AWS*

- Built a task management backend using **FastAPI** that exposed **12+ REST endpoints**, supporting complete task lifecycle operations.
- Improved API response times by **25%** by introducing Redis-based caching and optimized database schemas.
- Deployed the service on **AWS** using Docker and CI/CD pipelines, reducing manual deployment effort by **30%**.

Enterprise Workflow Management System ***Java****, Spring Boot, PostgreSQL, REST APIs*

- **Developed backend REST APIs to manage employee records (CRUD, search, filtering)** using Spring Boot, supporting **1K+ employee entries** with consistent performance.
- **Improved API scalability by 40%** by implementing pagination, request validation, and optimized data access using Spring Data JPA.
- **Increased backend maintainability by 35%** by applying layered architecture (controller, service, repository) and centralized exception handling.

GatoRides – Ride-Sharing Web Application *Golang, React, MongoDB, REST APIs*

- **Built a full-stack ride-sharing platform supporting 3 user roles (riders, drivers, admins)** by implementing authentication and ride-matching workflows, improving booking efficiency by **35%**.
- **Designed stateless backend REST APIs for users, rides, and sessions** using Golang services, supporting **100+ concurrent requests** during load testing.
- **Reduced end-to-end request latency by 30%** by optimizing MongoDB queries, indexing, and API response payloads.
