Education

University of Florida, Florida, United States **August 2024 - May 2026**

Master's, Computer Science ***GPA: 3.92 / 4.00***

- Courses**:** Data Structures & Algorithms, Object-Oriented Programming, Operating Systems, Computer Networks, Distributed Systems, Database Systems, Software Engineering, Cloud Computing

Skills

Programming Languages: Java, C#, Python, C, C++, JavaScript, TypeScript, SQL, Bash

Backend Frameworks & Services: Spring Boot (Java), ASP.NET Core (.NET), FastAPI, Flask, Express.js, Node.js

Databases: PostgreSQL, MySQL, MongoDB, DynamoDB, Redis, Elasticsearch

Cloud & DevOps: AWS (EC2, Lambda, S3, RDS, DynamoDB), Docker, CI/CD Pipelines, GitHub Actions, Jenkins

Software Engineering: RESTful APIs, Microservices Architecture, Object-Oriented Design, Distributed Systems, System Design Fundamentals, Agile/Scrum

Experience

Software Engineer **Jan 2025 - Present**

University of Florida *Gainesville, Florida*

- **Developed scalable backend services using C# and ASP.NET Core (.NET)** by implementing RESTful APIs and asynchronous request handling, supporting **100+ concurrent users** with stable performance.
- **Designed REST APIs with pagination, filtering, and model validation** using ASP.NET Core MVC patterns, enabling efficient data access as request volume scaled by **2×+**.
- **Integrated Entity Framework Core with PostgreSQL/SQL Server** to optimize data access patterns, reducing query execution time by **30%** through indexing and relationship tuning.
- **Automated containerized builds and deployments** using **Docker and CI/CD pipelines**, reducing deployment-related failures by **25%** and improving release consistency.

Software Development Engineer **May 2022 - December 2023**

C Square Solutions *Bangalore, India*

- **Designed and implemented RESTful backend services** using **Java (Spring-based services) and Python**, supporting **5+ production applications** and handling **10K+ requests per day** with stable latency under peak load.
- **Improved API and database performance** by optimizing SQL queries, adding indexes, and tuning joins in **PostgreSQL**, reducing average query execution time by **35%**.
- **Refactored backend codebases into layered architectures** (controller, service, repository) using dependency injection, improving maintainability and reducing recurring production defects by **20%**.
- **Built and maintained CI/CD pipelines** with **Jenkins, GitHub Actions, and Docker**, automating build, test, and deployment workflows and reducing manual deployment effort by **30%**.

Projects

Task Management API ***C#****, ASP.NET Core* ***(.NET)****, Entity Framework, SQL Server*

- **Built a RESTful backend API with 12+ endpoints** using ASP.NET Core (.NET) to manage tasks and users, supporting complete task lifecycle operations.
- **Improved data access efficiency by 25%** by integrating Entity Framework Core with optimized entity relationships and query patterns.
- **Strengthened API security and reliability** by implementing input validation, proper HTTP status handling, and structured error responses.

Enterprise Workflow Management System ***Java****, Spring Boot, PostgreSQL, REST APIs*

- **Developed backend REST APIs to manage employee records (CRUD, search, filtering)** using Spring Boot, supporting **1K+ employee entries** with consistent performance.
- **Improved API scalability by 40%** by implementing pagination, request validation, and optimized data access using Spring Data JPA.
- **Increased backend maintainability by 35%** by applying layered architecture (controller, service, repository) and centralized exception handling.

GatoRides – Ride-Sharing Web Application *Golang, React, MongoDB, REST APIs*

- **Built a full-stack ride-sharing platform supporting 3 user roles (riders, drivers, admins)** by implementing authentication and ride-matching workflows, improving booking efficiency by **35%**.
- **Designed stateless backend REST APIs for users, rides, and sessions** using Golang services, supporting **100+ concurrent requests** during load testing.
- **Reduced end-to-end request latency by 30%** by optimizing MongoDB queries, indexing, and API response payloads.
